

Cerec

The future of cosmetic restorations

The revolutionary Cerec is a chairside system for preparing permanent porcelain onlays, inlays, crowns and veneers. Smile Dental was among the first dental practices in Australia to use Cerec technology.

The Cerec system enables the most precise porcelain restorations to be prepared while you wait, eliminating the need for multiple appointments. Like traditional porcelain restorations, Cerec restorations are colour-matched and very strong.

Your dentist prepares the tooth requiring restoration, then scans an image of the prepared tooth into the Cerec system. The Cerec then mills a perfectly proportioned and colour-matched porcelain restoration, ready for placement, in a matter of minutes.

Your Cerec cosmetic restoration is completed and fitted-and you're smiling again-in one visit.
